The State of the Pike River/Lake Carmi Watersheds

A watershed planning group meeting to explore the progress and needs of the Pike River and Lake Carmi Watersheds for improved soil and water health

The Pike River and Lake Carmi Watersheds have been the focus of prioritized technical and financial assistance support from the Vermont Agricultural Water Quality Partnership over the past 4 years with one year remaining for prioritized assistance.

This meeting will focus on the progress made in these watersheds through the strategic plan to protect and improve water quality and reduce phosphorus runoff from agricultural fields.

We will assess our progress and evaluate the remaining conservation needs.

Join us to learn more about the successes that have been achieved thanks to the conservation efforts of farmers in these watersheds.

Pizza and refreshments will be provided.
