# Water Quality Workshop

***WikiWatershed: Estimating changes in water quality  
with map based computer calculations***

March 15<sup>th</sup>, 2018 5:30pm  
Franklin Elementary School library

Join us for a free webinar on Wikiwatershed, a freshwater stewardship tool. Dr. David Arscott, of Penn State University, will guide us through the use of this open access tool to simulate runoff and model & monitor our watershed. With this tool we can better understand how nutrient models work and run scenarios such as increased buffer widths, or adding a rain garden to every property, to explore ideas on what it will take to reach the nutrient goals for Lake Carmi.

Bring your Wifi enabled laptop if you have one or join us to follow along.

Can't make it in person? Contact Emily for directions on joining in remotely for the webinar.
